

Vicom Systems and Tiger Technology Deliver Simplified Storage Management and High Availability No Downtime Storage Access

Creative professionals in the media and entertainment market gain continuous access to video content and enterprise class SAN storage management.

Santa Clara, Calif. – December 1, 2011 – Vicom Systems, a leading provider of transparent wire-speed data services for systems and storage, today announced that Vicom Systems Vmirror™ product has been certified for metaSAN, a high speed file sharing SAN (storage area network) management application from Tiger Technology, a provider of SAN and workgroup management software solutions for creative professionals.

The certification allows joint customers with large-scale video SAN storage infrastructures to add continuous high availability access and data protection to existing metaSAN customers. The combination of Vicom's Vmirror™ appliance and metaSAN simplified storage management provides customers with an enterprise class SAN storage solution tailored to meet their budget and performance requirements.

“Performance, reliability and affordability are three of the most sought after SAN requirements. Given storage often represents the single largest SAN expense, users are always looking for ways to save money without sacrificing reliability” says Alex Lefterov, CEO at Tiger Technology. “Vicom Vmirror™ allows full redundancy to be achieved across multiple off-the-shelf and affordable RAID units. In addition to providing bullet-proof reliability, the Vmirror™ effectively doubles the available SAN throughput.”

“We are delighted to be entering this key partnership with Tiger Technology. This is part of our ongoing commitment to provide customers in the media and entertainment market with integrated enterprise SAN storage solutions at affordable prices. metaSAN's ease-of-use, ability to share digital content at high speed, and cross-platform SAN, along with Vmirror™ continuous high availability features, make it a compelling solution for video content creators, said Horatio Lo, managing director of Vmirror division, Vicom Systems.

About metaSAN

metaSAN is a high-speed, cross-platform, file-level sharing SAN management software that sets new standards for workgroup collaboration. metaSAN enables multiple users to share access to common data files in workgroups where heavy bandwidth requirements are the norm. Targeted to the needs of digital content creation professionals involved with the creation of animation, digital intermediates, audio, graphics, satellite imagery, video clips, etc., as part of the production process, the software also meets the needs of a wide range of enterprise users in other markets including imaging, digital prepress and corporate/government.
